

Project Executable Files

Date	15 March 2026
Team ID	UNM1659GenieBirds
Project Name	EduGenie – AI-Powered Learning Assistant
Maximum Marks	3 Marks

Project Executable Files

This section documents the files required to run and evaluate the EduGenie solution. The final submission package should contain the complete source code, setup instructions, dependency information, configuration guidance and any applicable deployment or demonstration links.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA – if no database is used
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	To be added
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA – web application
8	Dockerfile / Containerization config (if applicable)	NA – if not containerized
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	To be added

Step 2: File / Folder Structure

A suggested submission structure for the EduGenie project is shown below. Rename folders/files to match the actual project before submission.

```

/EduGenie
  /src          - Main application source code
  /components   - Reusable UI / functional components
  /services     - AI/API service integration
  /tests        - Test files and test cases
  /docs         - Project documentation
  /config       - Configuration files
  README.md    - Setup and run instructions
  requirements.txt - Python dependencies (if Python backend is used)
  .env.example  - Example environment variables
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	To be added if the project is hosted online
Login Credentials (Demo)	Not required unless the deployed application uses authentication; add evaluator credentials if applicable
Platform / Hosting Provider	To be added (e.g., Render, Vercel, AWS, Azure) if deployed
Repository Link	To be added – GitHub/GitLab repository URL
Demo Video Link	To be added if a demo video is required

Submission note: Replace all “To be added” fields with the team's actual links before final submission. Do not submit private API keys, passwords or other secrets; provide an .env.example file with placeholder values instead.

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run the project locally. The commands below are a general structure; update them to match the actual EduGenie technology stack.

Pre-requisites:

Python 3.x (if the backend is Python-based), a code editor, Git, internet access and the required AI/API credentials configured locally.

Step 1: Clone or download the EduGenie project repository.

Step 2: Install the project dependencies using the dependency file provided in the repository.

Step 3: Create a local `.env` file from `.env.example` and add the required configuration/API key values.

Step 4: Start the EduGenie application using the run command specified in `README.md`.

Step 5: Open the local application URL shown by the development server.

Step 6: Test the main features: Ask a Question, Explain a Topic, Generate Quiz, Summary and Recommended Learning Path.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	AI response time depends on the availability and response time of the external AI/API service.	Check API connectivity and use suitable request timeouts.
2	The application may require a valid API key/configuration before AI features can be used.	Provide <code>.env.example</code> and configure the required key locally.
3	Exact deployment/access details depend on the final hosting environment.	Add the final hosted URL, repository and demo link before submission.

Final submission reminder: Ensure the uploaded executable/source package contains the same file structure described above and that the README instructions are sufficient for an evaluator to start and test EduGenie.
